About this Report

Information Services Group Inc. is solely responsible for the content of this report. Unless otherwise cited, all content, including illustrations, research, conclusions, assertions and positions contained in this report were developed by, and are the sole property of Information Services Group Inc.

The research and analysis presented in this report includes research from the ISG Provider Lens™ program, ongoing ISG Research programs, interviews with ISG advisors, briefings with services providers and analysis of publicly available market information from multiple sources. The data collected for this report represents information that ISG believes to be current as of December 2020 for providers who actively participated as well as for providers who did not. ISG recognizes that many mergers and acquisitions have taken place since that time, but those changes are not reflected in this report.

All revenue references are in U.S. dollars (\$US) unless noted.

The lead author for this report is Ron Exler. The editors are Ipshita Sengupta, Ambrosia Sabrina and Sajina B. The research analysts are Ammar Mohammed and Sidhanth Prasad and the data analyst is Bhanwar Chauhan. The quality and consistency advisors are Bob Krohn, James Burke and Tony Mataya.

ISG Provider Lens™ delivers leading-edge and actionable research studies, reports and consulting services focused on technology and service providers' strengths and weaknesses and how they are positioned relative to their peers in the market. These reports provide influential insights accessed by our large pool of advisors who are actively advising outsourcing deals as well as large numbers of ISG enterprise clients who are potential outsourcers.

For more information about ISG Provider Lens™ studies, please email ISGLens@isg-one.com, call +1.203.454.3900, or visit [ISG Provider Lens™](https://www.isg-one.com).

ISG Research™ provides subscription research, advisory consulting and executive event services focused on market trends and disruptive technologies driving change in business computing. ISG Research™ delivers guidance that helps businesses accelerate growth and create more value.

For more information about ISG Research™ subscriptions, please email contact@isg-one.com, call +1.203.454.3900, or visit [research.isg-one.com](https://www.research.isg-one.com).

EXECUTIVE SUMMARY

The global pandemic of COVID-19 unquestionably accelerated the move to digital services in the healthcare industry. However, ISG considers this the acceleration of pre-pandemic activity by healthcare providers and payers to enhance operations, reduce costs and improve engagement with their stakeholders using digital services.

For years, new players have been entering the healthcare markets from the technology solutions business, including hyperscale cloud behemoths such as Amazon, Google and Microsoft. In October 2020, Microsoft released Microsoft Cloud for Healthcare, which includes data models, cross-cloud connectors, workflows, application programming interfaces (APIs) and built-in healthcare-specific components, along with its horizontal cloud apps and services. Salesforce Health Cloud is a popular healthcare customer relationship management (CRM) solution supported by most service providers in this study. At present, health technology stalwarts such as Allscripts, Cerner and Optum are expanding their service offerings, posing a competitive threat to traditional IT service providers.

The service providers in this industry are ready for a change not only because of new entrants and the shift to digital and cloud but also because of contract expiration. According to ISG Research, between 2021 and 2023, a total of 384 IT outsourcing (ITO) deals are expected to expire in the healthcare industry in North America. Application development and management (ADM) and infrastructure, as well as pure ADM services, account for about 74 percent of the total expiring deals by total contract value. As healthcare companies in the U.S. seek to control costs and change with the market, digital transformation is growing, along with business process as a service (BPaaS).

Interoperability remains a challenge for the industry, resulting in inadequate data sharing, especially between payers and providers. The Fast Healthcare Interoperability Resources (FHIR) standard was developed to exchange health information. In December, the U.S. Centers for Medicare and Medicaid Services (CMS) issued a proposed rule to require Medicaid, Children's Health Insurance Program (CHIP) and Qualified Health Plan (QHP) programs to build HL7 FHIR-based APIs to support data exchange and prior authorization. The rule also includes a proposed API standard for healthcare operations nationwide. The 21st Century Cures Act: Information Blocking, Interoperability, and the Office of the National Coordinator for Health Information Technology (ONC) Health IT Certification Program Final Rule (ONC Cures Act Final Rule) requires health IT developers to comply with a set of certifications, APIs and other data access improvements. In April, also to address interoperability Google Cloud rolled out the general availability of Cloud Healthcare API, a tool to make it easier for health systems and providers to connect data across different sources and share that data with patients. In December, Amazon Web Services (AWS) launched HealthLake for storage and analysis of data, automatically structured into the FHIR standard. All the service providers in this study embrace the FHIR standard in their digital transformation programs.

Automation is key to digital services as healthcare enterprises gradually adopt robotic process automation (RPA) and artificial intelligence (AI) technologies to improve specific processes, including claims processing, medical diagnosis and patient care management. With the ongoing COVID-19 pandemic, there is an increased adoption of telemedicine systems as doctors must overcome lockdowns and reduce in-person exposure risks to

treat their patients. Healthcare providers are deploying connected healthcare monitoring devices at an explosive rate: According to the Consumer Technology Association, the U.S. shipment revenue rose by 73 percent in 2020 and is forecast to reach US\$1.2 billion by 2024. Security is an essential component of a digital services ecosystem for employee productivity and patient record protection. In addition, ride-hailing platform companies are joining with their own services. Lyft Healthcare already provides non-emergency medical transportation (NEMT) services in the U.S., and it recently partnered with Anthem, JPMorgan Chase, United Way and others to get people in underserved communities to COVID-19 vaccination sites.

The COVID-19 pandemic will continue to influence the behavior of U.S. policymakers, citizens and companies in the healthcare ecosystem in 2021 as they take a fresh look at the business of healthcare management in the war against this disease that is dragging onward. In early January 2021, the U.S. Department of Health and Human Services (HHS) renewed the declaration of the public health emergency from the COVID-19 pandemic, extending key waivers for regulations on services such as telehealth until April. Recent executive actions from the new presidential administration to help quell the pandemic include commitments to government assistance in prevention, care and treatments for COVID-19 and to the supply chain and worker health. In the next few years, the healthcare industry services for all aspects of care will look radically different. Governmental and intergovernmental agencies are building new frameworks for disease response and data sharing. Public and private alliances and collaborations are emerging and will be mandated soon. Regulations, spending priorities and the current resiliency posture of healthcare

ecosystems will determine the “new future” for healthcare payers and providers. It is against this backdrop that digital services will be central to positive outcomes in health and the health business.

Payer Digital Transformation Services

According to the U.S. Census Bureau, the percentage of people with health insurance coverage for all or part of 2019 (the most recent year studied) was 92 percent, and private health insurance continued to be more prevalent than public, covering 68 percent and 34 percent of the population, respectively. However, the insured are dissatisfied with their health insurance companies. The American Customer Satisfaction Index (ACSI) shows that Americans were less satisfied with their health insurance in 2020, and the discontent is permeating nearly the entire industry. Member satisfaction weakened by 2.7 percent to an ACSI score of 72, bringing the industry to its lowest point since 2016. Claims are becoming harder to submit and processing is taking longer. However, the U.S. payers seek to remedy these issues, and digital transformation helps them meet member service requirements, changing regulations and competitive pressures. Payers measure the success of technology investments based on business outcomes, so finance and other business leaders – not IT – often drive digital transformation.

Payers are using RPA to automate mundane back-end business processes such as price estimates using predefined rules, documentation of insurance contracts, claims notification and verification processes across their value chain. Many payers apply AI in the back office by combining multiple data sources to interpret clinical data to improve services. Healthcare

payers require a frictionless flow of information between sales and service channels. By leveraging automation, payers can significantly lower costs, enable faster decision-making and focus on product and service innovations. More advanced technologies such as blockchain are rarely used, despite use cases such as sharing patient data records.

Accenture, Cognizant, HCL, IBM, Infosys, NTT DATA, Optum, TCS, UST and Wipro are identified as leaders, while EXL and Genpact are the Rising Stars.

Provider Digital Transformation Services

Healthcare providers are in crisis. In the U.S., the COVID-19 pandemic has overloaded hospitals, stalled elective procedures and reduced productivity, with many professionals unable to do their jobs, all of which has erased profits. The ACSI measures patient satisfaction with hospitals (including inpatient, outpatient and emergency room services) as well as ambulatory care (office visits to doctors, dentists, optometrists and mental health professionals). Following a sharp drop last year of more than 5 percent, patient satisfaction with hospitals fell to the lowest level in nearly two decades. For ambulatory care, patient satisfaction retreated for the first time in five years, dropping to an all-time low.

In response, healthcare providers are changing from a fee-for-service to a value-based care (VBC) delivery model, as patients are increasingly expecting personalized and cost-effective care. Digital services are facilitating greater value at reduced cost with minimal touch interactions. In addition, VBC is shifting the healthcare paradigm from “disease care” to “health outcomes.” The service providers in this study embrace VBC and help their

clients move toward it through digital transformation. Investments in cloud solutions to help enable digital services are driven in part by the need for greater agility in the time of a pandemic, coupled with the growing expectation for transparency through easily accessible portals and mobile solutions.

Healthcare providers are increasingly introducing wearables and other sensors to monitor patient health and influence the course and choices of patient care. Digital channels that are centered around the patient can dramatically influence wellness, facilitate the capture of data to improve efficacy of treatments and feed other applications to monitor and better manage diseases.

Accenture, Cognizant, Genpact, IBM, NTT DATA, UST and Wipro are identified as leaders, while Conduent is a Rising Star.

Payer Business Process As A Service

Automating business processes is critical to payers seeking to reduce costs and streamline services. Business process as a service (BPaaS) reduces TCO by breaking silos and optimizing costs. It also helps payers modernize their operations and accelerate their transition to a VBC model. Operational flexibility is another benefit that is considered important in pandemic and post-pandemic times. Cloud infrastructure supports modernization of payer infrastructure as well as movement to enterprise agility, which will help the service providers in this study that excel in BPaaS to offer strong cloud migration services.

Accenture, Cognizant, HCL, IBM, Infosys, NTT DATA, Optum, TCS, UST and Wipro are identified as leaders, while EXL and Genpact are identified as Rising Stars.

Introduction

Simplified Illustration

Definition

The healthcare and life sciences industries are, more than ever, under pressure to change. The COVID-19 pandemic and public demand for more effective outcomes are mandating the acceleration of actions needed to better meet care lifecycle requirements and build patient-centric business models. All segments of the industry are being compelled to comply with new regulations, integrate waves of competitive mergers and acquisitions and adapt to the needs of the aging population. However, blockbuster mergers have precipitated costly integration efforts. Also, consumers expect advanced and convenient digital service delivery. At the same time, many companies are struggling to keep pace with growing demands for their services and increasing competitive pressures.

Definition (cont.)

Scope of the Report

Digital transformation helps address many of the current and anticipated industry challenges. In the U.S. healthcare industry, digital transformation services help payer and provider segments evolve to better serve their constituents. As payers shift the focus of their purchase decisions to business outcomes, finance and other business leaders are driving digital transformation. While some enterprises do it themselves, others use BPaaS solutions. This report covers Healthcare Digital Services in the U.S. across three quadrants, shown below. A second report covers Healthcare Digital Services in Germany and a third covers Life Sciences Digital Services globally.

Provider Classifications

The provider position reflects the suitability of IT providers for a defined market segment (quadrant). Without further additions, the position always applies to all company sizes classes and industries. In case the IT service requirements from enterprise customers differ and the spectrum of IT providers operating in the local market is sufficiently wide, a further differentiation of the IT providers by performance is made according to the target group for products and services. In doing so, ISG either considers the industry requirements or the number of employees, as well as the corporate structures of customers and positions IT providers according to their focus area. As a result, ISG differentiates them, if necessary, into two client target groups that are defined as follows:

- **Midmarket:** Companies with 100 to 4,999 employees or revenues between US\$20 million and US\$999 million with central headquarters in the respective country, usually privately owned.
- **Large Accounts:** Multinational companies with more than 5,000 employees or revenue above US\$1 billion, with activities worldwide and globally distributed decision-making structures.

Provider Classifications

The ISG Provider Lens™ quadrants are created using an evaluation matrix containing four segments (Leader, Product & Market Challenger and Contender), and the providers are positioned accordingly.

Leader

The Leaders among the vendors/providers have a highly attractive product and service offering and a very strong market and competitive position; they fulfill all requirements for successful market cultivation. They can be regarded as opinion leaders, providing strategic impulses to the market. They also ensure innovative strength and stability.

Product Challenger

The Product Challengers offer a product and service portfolio that provides an above-average cover-age of corporate requirements, but are not able to provide the same resources and strengths as the Leaders regarding the individual market cultivation categories. Often, this is due to the respective vendor's size or weak footprint within the respective target segment.

Market Challenger

Market Challengers are also very competitive, but there is still significant portfolio potential and they clearly fall behind the Leaders. Often, the Market Challengers are established vendors that are somewhat slow to address new trends due to their size and company structure, and therefore have some potential to optimize their portfolio and increase their attractiveness.

Contender

Contenders still lack mature products and services or sufficient depth and breadth in their offering, but also show some strengths and improvement potential in their market cultivation efforts. These vendors are often generalists or niche players.

Provider Classifications (cont.)

Each ISG Provider Lens™ quadrant may include a service provider(s) which ISG believes has strong potential to move into the Leader quadrant. This type of provider can be classified as a Rising Star. Number of providers in each quadrant: ISG rates and positions the most relevant providers according to the scope of the report for each quadrant and limits the maximum of providers per quadrant to 25 (exceptions are possible).

Rising Star

Companies that receive the Rising Star award have a promising portfolio or the market experience to become a leader, including the required roadmap and adequate focus on key market trends and customer requirements. Rising Stars also have excellent management and understanding of the local market. This award is only given to vendors or service providers that have made significant progress toward their goals in the last 12 months and are expected to reach the Leader quadrant within the next 12-24 months due to their above-average impact and strength for innovation.

Not In

The service provider or vendor was not included in this quadrant. There might be one or several reasons why this designation is applied: ISG could not obtain enough information to position the company; the company does not provide the relevant service or solution as defined for each quadrant of a study; or the company did not qualify due to market share, revenue, delivery capacity, number of customers or other metrics of scale to be directly compared with other providers in the quadrant. Omission from the quadrant does not imply that the service provider or vendor does not offer this service or solution, or confer any other meaning.

Healthcare Digital Services Quadrants

ENTERPRISE CONTEXT

Payer Business Process as a Service

This report is relevant to healthcare payers in the U.S. for evaluating service providers of payer business process as a service (BPaaS).

In this quadrant report, ISG highlights the current market positioning of service providers offering payer BPaaS to enterprises in the U.S. and how each service provider addresses the key challenges faced in the region.

As the healthcare market moves toward managing by outcomes, the BPaaS alternative is emerging as an elegant strategic option for payers. The pandemic has exacerbated a situation in which plan members and healthcare providers are accessible to payers and increasingly competent to change. Thus, adopting a BPaaS strategy can lead to stronger results as payers can create efficiencies across the operations landscape. It can support connections and orchestrate data flows, allowing payers to operate their businesses more efficiently and intelligently.

As the BPaaS model continues to evolve, service providers are developing their offerings to meet the growing requirements of healthcare payers and demonstrate agility in transforming the way healthcare is experienced by its constituents — members, providers, brokers/agents and regulators.

Some payer BPaaS providers in the U.S. also offer digital transformation services to payers and other providers. Enterprises are looking for trustworthy and committed partners that can address challenges and provide a roadmap for setting up an optimal IT infrastructure.

Digital transformation, IT and technology professionals should read this report to understand how providers of payer BPaaS fit their digital transformation initiatives, IT architectures and cloud strategies.

Business strategy leaders, through this report, will gain knowledge of providers' product portfolio capabilities, which, in turn, can support the selection of services to enable a streamlined workflow and enhance functionality.

Procurement and vendor management professionals should read this report to develop a better understanding of the current landscape of healthcare service providers in the U.S. for digital transformation. The report also shows how the technical and integration capabilities of a service provider compare with the rest in the market.

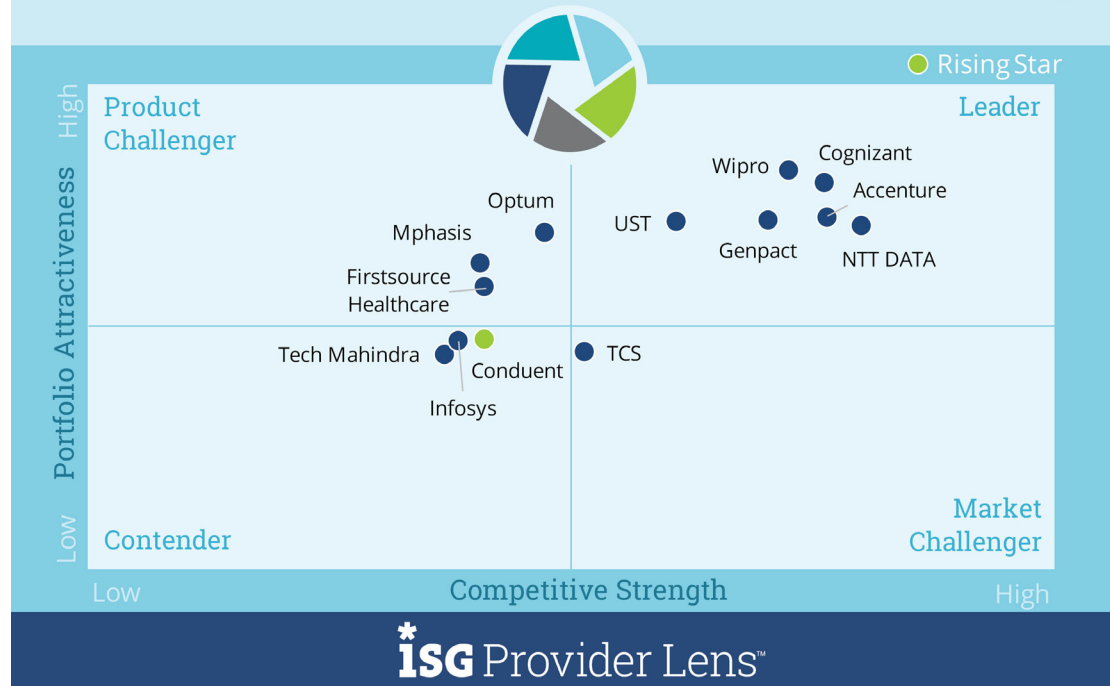

PAYER BUSINESS PROCESS AS A SERVICE

Definition

This quadrant assesses healthcare payer BPaaS for end-to-end outsourcing of business processes across the technology stack to improve business outcomes. The service provider integrates services, processes, applications and infrastructure into a comprehensive service with a clear objective of cost control. Apart from cost savings, BPaaS also promotes improved member and provider experience, operational insights, improved quality of care and regulatory compliance.

PAYER BUSINESS PROCESS AS A SERVICE

Eligibility Criteria

- Ability to advise, with focus on outcomes, via member engagement and financial value metrics
- Ability to support any application or platform, including legacy systems
- Established protocols and technologies for integrated security
- Ability to implement appropriate intelligent automation for specific business processes
- Experience implementing and expanding health plan analytics
- Ability to support back-office, middle-office and front-office business processes
- Competencies in integrated governance and performance service management
- Established or emerging partnerships with application providers, platform companies and infrastructure firms

Observations

- **Accenture** offers payer BPaaS via its Intelligent Health BPS for common processes and its Advanced Health Analytics platform. The company also employs thousands of BPS professionals dedicated to healthcare clients.
- **Cognizant** is one of the leading service providers for U.S. healthcare payers with its industry expertise and tools, cloud and digital portfolio. In 2020, it invested US\$120 million in R&D of platforms that support its BPaaS solutions.
- **Genpact** serves payers with a strong BPaaS offering that evolved from Genpact's BPO heritage, a growing focus on digital transformation capabilities and deep domain expertise in the health-care ecosystem. To bolster its U.S. operations, in January 2021 it acquired Enquero, a small California-based firm that offers data engineering and data-led digital transformation services.
- **NTT DATA** has a mature and proven offering called Digital BPaaS for Health Plans that instantiates contract simplicity, utility consumption, intuitive scope, personalized bundles and flexible consumption units in outcome-based pricing models.

PAYER BUSINESS PROCESS AS A SERVICE

Observations (cont.)

- **UST** Healthcare-in-a-Box combines its capabilities for payer Core Administration Platform Services (CAPS) with partner solutions for member experience, contact center, document interchange, imaging, payment integrity, financial integrity and population health services.
- **Wipro** BPaaS offers management of the entire payer value chain, including enrollment processing, member billing, fulfillment, care management and claims processing. Wipro recently entered a global strategic partnership with Plexis Healthcare Systems for claims and care management technology.
- **Conduent** (Rising Star) has begun to leverage its contact center and customer experience management in the healthcare payer business. It acquired the U.S.-based Health Solutions Plus (HSP) in 2019 to further enhance its core administration processing capabilities in the healthcare industry.

NTT DATA

Overview

NTT DATA Corp. provides IT services worldwide. It has 133,000 employees and generates annual revenue of US\$21 billion. It is part of the NTT Group, one of the world's largest telecommunications and IT companies and the world's 55th-largest company. NTT DATA Services is headquartered in Plano, Texas. Healthcare is one of its six focus industries, and NTT DATA has serviced healthcare payer clients for 50 years.

Strengths

Market presence: NTT DATA has more than 50 clients for its Digital BPaaS for Health Plans, including national, multistate, state and local plans. Its sweet spot is those with 50,000 – 300,000 members in the Medicare, Medicaid and Medicare Advantage segments and payers with 300,000 or more members in a commercial line of business.

Business outcomes: With a consumer focus, the BPaaS offerings use a high-performance service factory model with a component architecture, and with integration across business process, applications and infrastructure. Its offerings include automation and analytics, hosted through a secure private, public or hybrid cloud or on premises. NTT DATA offers a range of nearshore and offshore options. The company claims contract simplicity, utility consumption, intuitive scope, personalized bundles and flexible consumption units in outcome-based pricing models.

Digital engagement: Member and provider needs are changing with the pandemic, requiring payers to handle more interactions at any time of the day or night. NTT DATA BPaaS offerings include the digital solutions needed to improve engagement with members and providers. NTT DATA is also venturing its BPaaS into areas where the healthcare provider market integrates with the payer market, actively pursuing touchpoints between the healthcare provider and payer to deliver services to one another in a faster, streamlined, cost-effective manner.

Caution

NTT DATA does not have the name recognition of some competitors in the payer BPaaS market.

2021 ISG Provider Lens™ Leader

NTT DATA's Digital BPaaS for Health Plans offers a comprehensive yet flexible solution with advanced analytics, intelligent automation services and integrated workflow support.

Methodology

METHODOLOGY

The research study “ISG Provider Lens™ 2020 – Healthcare Digital Services” analyzes the relevant software vendors/service providers in the global market, based on a multi-phased research and analysis process, and positions these providers based on the ISG Research methodology

The study was divided into the following steps

1. Definition of Healthcare Digital Services
2. Use of questionnaire-based surveys of service providers/vendor across all trend topics
3. Interactive discussions with service providers/vendors on capabilities & use cases
4. Leverage ISG's internal databases & advisor knowledge & experience (wherever applicable)
5. Detailed analysis & evaluation of services & service documentation based on the facts & figures received from providers & other sources.
6. Use of the following key evaluation criteria:
 - Strategy & vision
 - Innovation
 - Brand awareness and presence in the market
 - Sales and partner landscape
 - Breadth and depth of portfolio of services offered
 - Technology advancements

Authors and Editors

Ron Exler, Author
Senior Advisor

Ron Exler is a Director and Principal Analyst with the ISG Provider Lens (IPL) service, a part of ISG Research, leading IPL studies including Internet of Things (IoT) and Healthcare Digital Services. Ron has led product management at enterprise software companies, run enterprise research advisory services, and advised, built and deployed innovative technology inside large enterprises. Ron holds a Master of Science degree in Cartography from the University of Wisconsin as well as a Bachelor of Science degree from Oregon State University. Ron also holds the ISG Digital Xpert certification.

Ammar Mohammed, Enterprise Context and Global Overview Analyst
Senior Analyst

Ammar is a lead analyst with ISG Provider Services. At ISG he works on provider workshops, thought papers and IPL studies focused on the Media, Healthcare and Life Sciences industries. He also tracks and assesses digital transformation trends and the impact of emerging technologies across the Healthcare and Life Sciences verticals. During his tenure, he has developed content for ISG Momentum™ and ISG Provider Lens™ in the areas of Healthcare, Life Sciences and Manufacturing industries. He is responsible for supporting research authors and authoring blogs, enterprise content and the Global Summary report with market trends and insights.

Sidanth Prasad, Enterprise Context and Global Overview Analyst Research Analyst

Sidanth Prasad is a research analyst at ISG and is responsible for supporting Provider Lens™ studies on Healthcare and Lifesciences. During his tenure, he has developed content for ISG Provider Lens™ in the areas of Healthcare and Life Sciences. He is responsible for supporting research authors and authoring blogs, enterprise content and the Global Summary report with market trends and insights.

Jan Erik Aase, Editor Partner and Global Head - ISG Provider Lens™

Mr. Aase brings extensive experience in the implementation and research of service integration and management of both IT and business processes. With over 35 years of experience, he is highly skilled at analyzing vendor governance trends and methodologies, identifying inefficiencies in current processes, and advising the industry. Jan Erik has experience on all four sides of the sourcing and vendor governance lifecycle - as a client, an industry analyst, a service provider and an advisor. Now as a research director, Partner and Global Head - ISG Provider Lens™, he is very well positioned to assess and report on the state of the industry and make recommendations for both enterprises and service provider clients.

ISG Provider Lens™ | Report: Healthcare Digital Services

March 2021

© 2021 Information Services Group, Inc. All Rights Reserved

ISG (Information Services Group) (Nasdaq: III) is a leading global technology research and advisory firm. A trusted business partner to more than 700 clients, including more than 75 of world's top 100 enterprises, ISG is committed to helping corporations, public sector organizations, and service and technology providers achieve operational excellence and faster growth. The firm specializes in digital transformation services, including automation, cloud and data analytics; sourcing advisory; managed governance and risk services; network carrier services; strategy and operations design; change management; market intelligence and technology research and analysis. Founded in 2006, and based in Stamford, Conn., ISG employs more than 1,300 digital-ready professionals operating in more than 20 countries—a global team known for its innovative thinking, market influence, deep industry and technology expertise, and world-class research and analytical capabilities based on the industry's most comprehensive marketplace data. For more information, visit www.isg-one.com.
